Get the low-down on U values...

## What do we mean by U value?

U value is a means of comparing the heat lost through various parts of a building. A part of a building with a U value of 4.0 W/m<sup>2</sup>K will lose twice as much heat as one with a U value of 2.0 W/m<sup>2</sup>K.

**The lower the U value the less heat you lose through your windows**
